

Clatterbridge Cancer Centre

Strengthening cancer care with managed IT services

Challenge

- 1 Clatterbridge Cancer Centre needed a secure, reliable network to support expanding clinical, research, and diagnostic services.
- 2 Existing Cisco ACI and SDA environments required remediation to meet healthcare demands.
- 3 Internal IT teams needed support to focus on optimising IT for patient care rather than routine network management.

Solution

WhiteSpider provide a comprehensive managed service across Cisco ACI, SDA, DNA Centre, Firepower, and ISE, offering 24/7 support, enhanced security, and centralised network management.

When the shortage of Cisco ACI expertise was keeping me up at night, I needed a partner I could trust. With WhiteSpider's expertise and problem-solving approach, I know our network is in safe hands. Their managed service gives me the reassurance of a team that really gets the urgency of healthcare operations.

James Crowther

Chief Technology Officer,
Clatterbridge Cancer Centre

Result

- ✓ Resilient, high-performance infrastructure enabling seamless access to applications and patient data.
- ✓ Simplified operations and unified visibility for the internal IT team.
- ✓ A scalable, secure network that supports ongoing clinical and research expansion.
- ✓ Increased confidence in a trusted partner delivering consistent, proactive IT support.
