Doccla gets results

50,000+

bed days saved
for the NHS.

97%

of patients surveyed
would recommend Doccla.

100%

DTAC compliant.

>95%+

compliance of patients
on Doccla RPM.

One of the only tech-enabled virtual ward
registered with the CQC.

29%

reduction in
emergency admissions.

Interoperable

with a wide range
of EHR systems.

HSJ

Partnership awards
FINALIST 2021 & 2022.

3:1

Every £1 spent on Doccla, the NHS saves
£3 when compared to traditional
virtual wards.

What makes Doccla different

End-to-end service

Doccla's end-to-end service means that clinicians can focus on care whilst we take care of everything else. That means managing devices, logistics, patient support, and the rest.

Device agnostic

We don't push proprietary hardware. Instead we constantly scan the market for the latest and greatest medical devices so that we're able to implement whatever your clinical teams need

Clinical capacity

As the first company to receive CQC certification for a tech-enabled virtual ward solution, Doccla is able to provide first line clinical support as and when our Trusts need it. Be it to cover out of hours or over weekends or when your clinicians are just stretched too thin. Doccla's team of experienced clinicians are on hand.

Digital inclusion

The Doccla app has all the features needed for remote monitoring whilst remaining simple and accessible for all patients - whatever their age and tech experience. Our mobile phones come pre-configured with all necessary apps and all have data plans so that the patient doesn't need WiFi at home either.

Quick, no-fee implementation

You will have a dedicated implementation team responsible for everything from Information Governance and ICT security to rolling out pathways. All at no extra cost

EHR Integrations

We work with global experts to integrate the Doccla platform with a wide and ever growing array of UK EHRs. And if we don't support yours yet, we'll do whatever it takes to add it to the list

Compliance monitoring and support

All the tech in the world is wasted if patients aren't using it. We monitor patient compliance and provide patients with support to make sure that your clinicians have access to the patient data they need when they need it. And we work with NHS-approved interpreters to provide this support in over 100 languages.

...accessible for all patients

Doccla's patient app is feature-rich but designed with our users in mind. Large font and a simple interface make sure the Doccla app is accessible even for elderly patients.

Collect essential data

Patients can submit vital measurements as well as symptom questionnaires. These measurements and questionnaires can be quick and simple to complete or built with complex branching tailored to each clinical team's needs.

Video call and message

When data alone isn't enough, the Doccla app connects patient and clinicians with in-app messaging and video calls.

Electronic health record integration

Doccla integrates with a wide range of patient record systems so that measurements taken at home on Doccla monitoring are written into the patient's electronic health record.

Clinician Dashboard

The clinician dashboard provides easy access to patient data right from an internet browser.

Tailor patient thresholds

Patient readings and responses outside of clinician-defined parameters will be flagged and prioritised in the workflow to make sure that patients always receive the attention they need.

NEWS2 supported

The Doccla platform supports both intermittent and continuous monitoring as well as the RCP's NEWS2 metric.

Measurements

Integrating with an array of industry leading devices, we offer a wide range of clinical measurements including:

Blood pressure

ECG

Respiratory rate

Body cell mass

Pain scale

Spirometry

O2 saturation

Weight

AFib detection

Activity

Height

Glucose in urine

Consciousness

Fat mass

Temperature

Heart rate

CRP

Patient Journey

1

Identification & Admission

Clinician selects and admits a patient onto the Doccla Virtual Ward. Patient receives devices.

2

Onboarding & Reporting

At home, the patient is onboarded and uses devices provided by Doccla and the patient app to send clinical data.

3

Monitoring

Clinician or Doccla clinicians monitor patients' vital signs, subjective responses and alerts via Doccla web dashboard.

4

Patient Support

If needed, the clinician can message the patient or hold a video call. They can also adjust patient's alert thresholds.

5

Discharge

When the monitoring is completed, the patient is discharged from the Doccla Virtual Ward and devices are collected.

“We are excited to be working with Doccla to implement best in class technology that means we can keep patients with long term conditions safe at home”

Dr. Fiona McCann

Respiratory Consultant
Northampton General Hospital NHS Trust

“Doccla’s team overcome system integration issues and support patients with the onboarding process”

Stuart Driver

Programme Manager
Cambridge Community Services NHS Trust

“This is a fantastic example of healthcare collaboration made possible by the strong relationships we have with our acute and primary care colleagues across the region, combined with the medical technological expertise provided by Doccla”

Elizabeth Kendrick

Medical Director
Hertfordshire Community Trust

“The service has exceeded all expectations, has truly thrived, and has achieved excellence. Clients have embraced it. They love it, use it, and want it to continue.”

About Doccla

Doccla is the virtual ward company. Founded in 2019, we have since maintained an unwavering ambition to supply the very best patient monitoring service with the highest levels of clinician and patient satisfaction. Clients praise our comprehensive support, which frees them from worrying about implementation, technology, logistics and patient compliance. We take care of every detail to allow clinicians to focus on what they do best, caring for patients. Our service is proven to reduce costs for a wide range of pathways, improving outcomes and freeing resources. It is the future of healthcare, today.
