

Next level healthcare

# Overview of Isla.

In just under 4 years since launching, Isla has been able to:

- Work with 30+ NHS Trusts
- Support 40+ specialties across Acute and Community
- Receive over 1 million submissions annually of videos, photos, forms and sound recordings
- Grow to 50 team members
- Deliver cash positive implementations in 100% of our rollouts
- Partner with our first international hospitals outside of the UK and EU

# Who are we.

---

We're a growing team who are working to help improve the way that healthcare is delivered.

Isla empowers patients to monitor their health using the media types of our daily digital conversations - photos, videos, sound recordings and text.

This gives clinicians a real time view of every patient's condition and builds the foundation for automating clinical decision making.

# Isla's breadth of application.

---

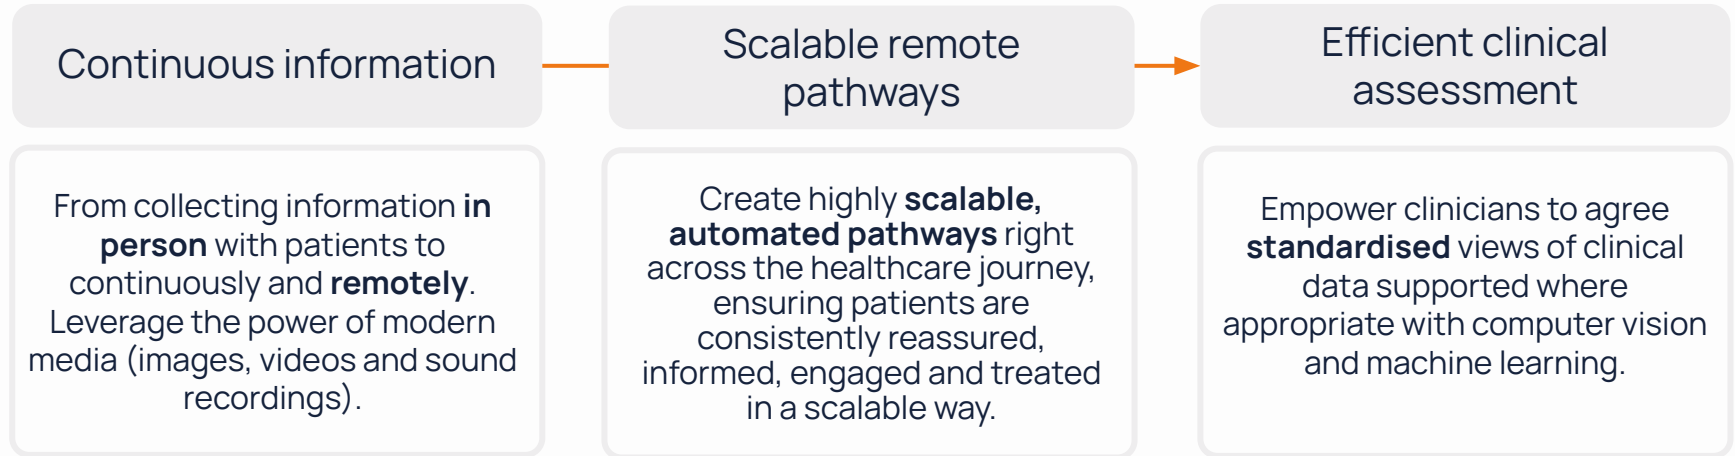

Isla's technology is specialty agnostic and is currently being used in over 40 different clinical pathways within the NHS.

# A vision for change.

---

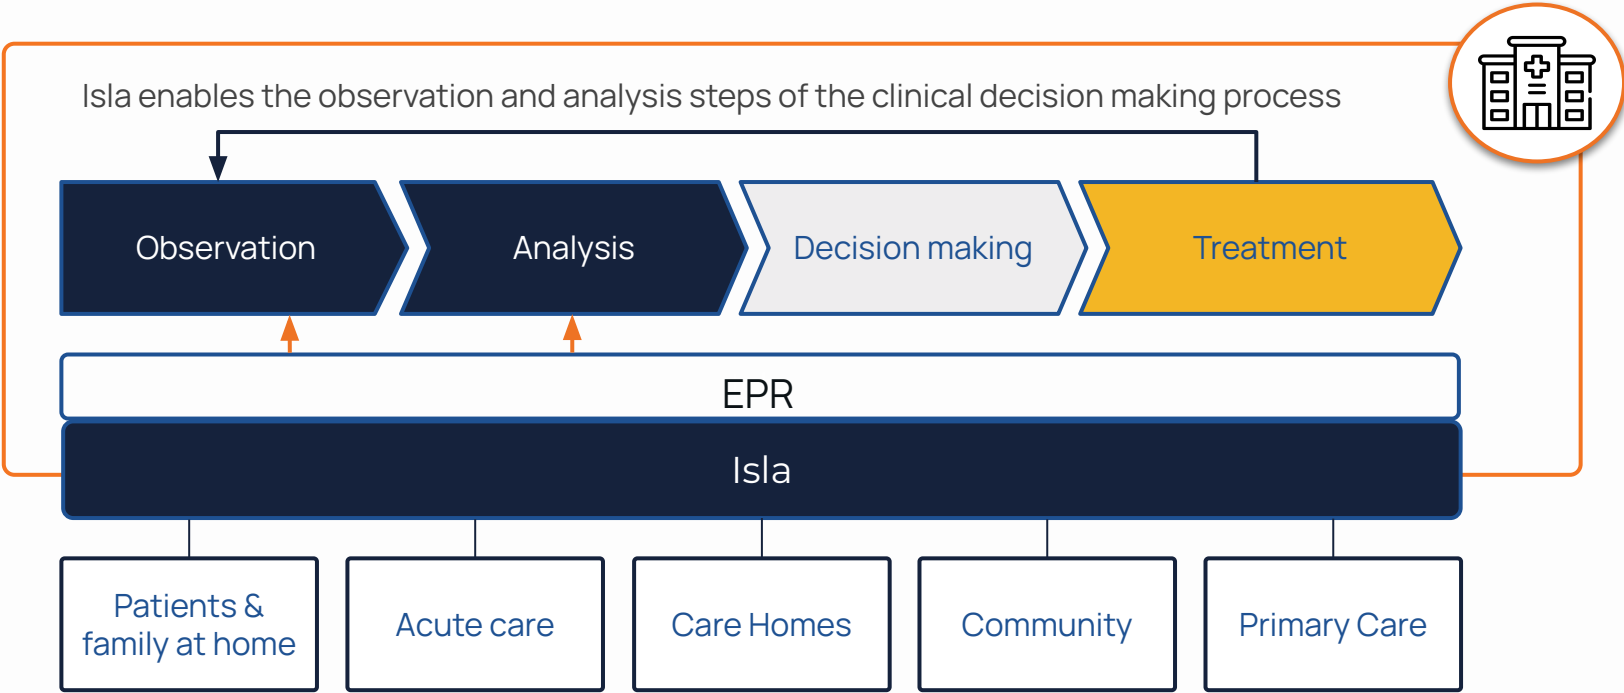

In a world where the condition of every patient is understood at all times, health systems will be effective and scalable. **Isla moves us towards this ideal.**

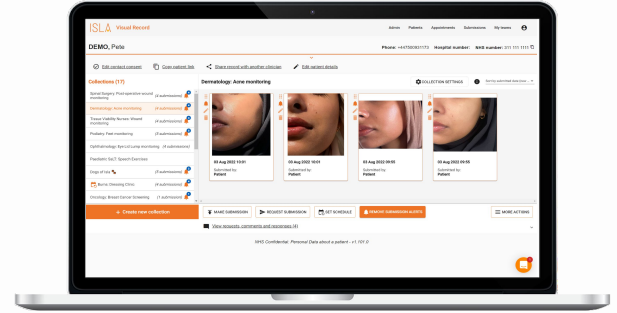

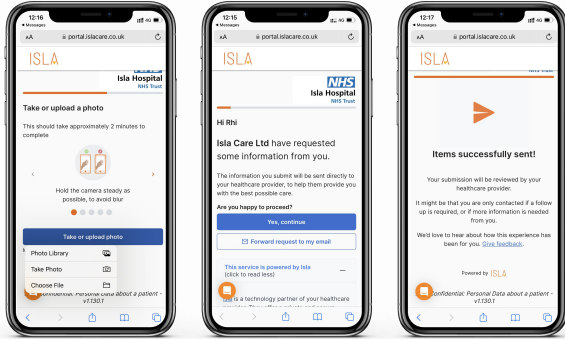

Isla is the leading platform to implement remote care effectively and at scale

# Leveraging the wider community.

Isla continuously collects and consolidates patient information for faster decision making

# Enable continuous information.

Patients, family members, carers and the broader support network flow the right information into the health system.

Low friction process - complete in less than 90 seconds.

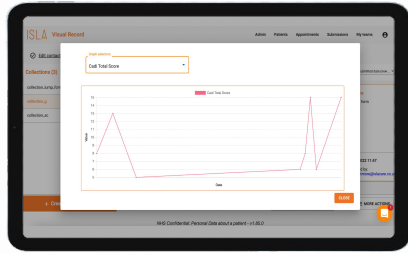

Give clinicians the insight they need through supporting multiple formats of information:

- Clinical questionnaires
- Videos
- Images
- Sound recording

Isla offers a comprehensive solution across the Hospital and is being used today across > 35 different specialties.

Isla engages patients and provides the market leading response rate<sup>1</sup>

# Enhance clinical assessment.

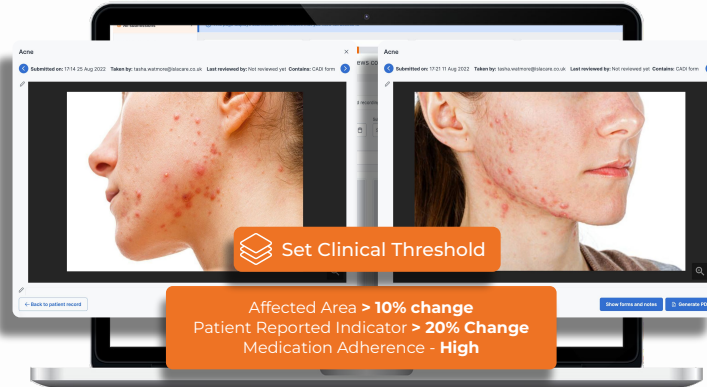

Enable continuous information.

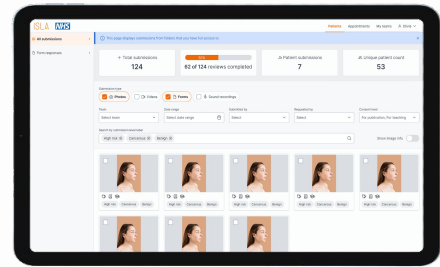

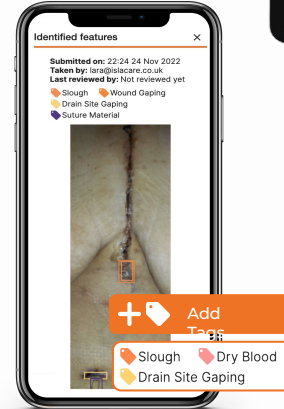

Configure Isla to present exactly the information required to make a remote clinical assessment.

Understand changes in a patient's condition with sophisticated and configurable clinical thresholds.

Use Isla to set tags for patients which define the appropriate next step.

Track groups of patients or individuals and setup automated schedules

Isla has revolutionised the pathway as we have been able to run a remote clinic which is more effective and much safer.

**Dermatology Consultant  
CWFT NHS Trust**

# Deliver scalable remote pathways.

---

## Early screening and risk assessment

- Streamline the elective waiting list with validation and pre-operative risk assessment
- Powerful automation capabilities eg check for changes in patient health status automatically every 3 months until listed for surgery

## Remote monitoring of patient conditions

- Supporting the reduction in follow up appointments through the shift to asynchronous and scalable active monitoring
- Reducing unnecessary travel for patients

## Patient initiated follow up

- Place patients on PIFU list (in EPR or directly in Isla)
- Automatically send an access link with optional reminders (eg monthly)
- Patients submit PIFU request with clinical form + optional media

## Virtual wards / Hospital at Home

- Collaborative sharing of visual record collections between multidisciplinary team (MDT) eg across Community care

# Isla's Integrations.
