Discover 3T

Providing an alternative to paper-based audit trail books, 3T is a fully featured, cloud-based compliance platform.

Combining an intuitive mobile app for use at the point of care, with an interactive web portal, 3T guides users through all process steps, tracking decontamination events and making them available to view in real time across their organisation.

Scan the QR code on the reverse to book a demo with your local sales team.

3T Snapshot

Administration

Through an interactive web portal, 3T provides administrators the autonomy to simply and quickly setup and maintain their organisation.

Dashboards

3T enables organisations to visualise user interactions and their use of products, medical devices and clinical settings in a friendly and effective way.

Scanning

The mobile app adopts a 'scan first' approach, where users can fast track each process, from initial login to logging crucial product and medical device data.

Localisation

In the same way Tristel products are globally recognised and widely used, 3T has been developed to cover regional regulations.
