NHS

Derbyshire Healthcare

NHS Foundation Trust

“boxxe’s professional service for our data migration to Microsoft’s secure cloud was exceptional. Despite our unconventional timing requirements, they took it in their stride, communicated well, showed expertise, and delivered minimal disruption, competitive pricing, and a successful, quick, and secure migration. Overall, they provided the whole package we needed!”

Data Migration customer success story

Results

Sizeable data migration

8TB of data

It wasn't quite the simple, quick 'lift and shift' plan we'd intended, but we delivered all the same.

Undisrupted access

50 users per night

We batched migrations to ensure user access wasn't disrupted – migrating 50 users each night, equivalent to 250GB worth of data.

Future-proofed networks

NHS digital compliant

Thanks to a quick and secure OneDrive and Teams migration, the Trust's data is future-proofed against the MS 2012 server shutdown, and compliant with NHS Digital.

Challenge

With their Microsoft file server heading towards decommission, Derbyshire Healthcare NHS Foundation Trust needed to migrate their data in the fastest, most effective and least disruptive way possible.

Plan

As Microsoft SharePoint accredited experts, boxxe devised a plan to move the existing user and shared network data on the file server into SharePoint and OneDrive using Quest Essentials.

Approach

We ran data analytics through Quest to identify the quantity, age and viability of their data. We moved the data with next-level security measures, by migrating personal network data to OneDrive, and shared network data to Microsoft Teams.

Outcome

We've now future-proofed their data, ahead of the Microsoft 2012 server shutdown. Trust stakeholders also have the tools to take ownership of their data, and with the data filed in different groups within Teams, each department head holds responsibility for it – no more running to IT when you can't get the right access.
