

OpenEHR: Opening a treasure trove of new opportunities through digitised patient record keeping

OpenEHR, powered by Better Technology, is a next-generation healthcare solution that leverages open data and low-code tools to transform patient care. Our data repository unifies all patient clinical and demographic information using openEHR and FHIR standards, and binds it to a multitude of terminologies. Comes with a query language and standard APIs for bi-directional communication. A unique two-level architecture ensures data consistency while allowing for use-case variation. Our focus is to simplify the work of health and care teams, driving the digitalization of healthcare while advocating for data accessibility and vendor-neutral solutions.

Clients using Better have experienced exceptional benefits

860

Hours Saved Annually: Experience a significant reduction in administrative tasks, freeing up time for more critical healthcare activities.

70%

Less Unnecessary Outpatient Appointments: Streamline patient appointments, reducing unnecessary outpatient visits and improving resource utilization.

35%

Reduction in Hospital Readmissions: Improve patient outcomes with reduced readmission rates, enhancing the quality of care.

4x

Less Time Spent on Application Development: Boost productivity and efficiency in healthcare application development, saving time and resources

With OpenEHR, you're embracing a new era in healthcare, leveraging advanced record keeping and data utilisation for improved efficiency and better patient outcomes

Key Features:

Clinical Modelling Made Easy

- A web-based clinical modelling tool for openEHR model development simplifies data modelling tasks, allowing visual authoring of clinical models, archetypes, and templates.

Streamlined User Experience

- A clinical portal and design system provide a unified experience across different healthcare products and tools, simplifying healthcare professionals' work.
- Instant Access to All Patient Information
- A configurable, web-based portal grants care team members instant access to relevant patient information on any device at any time. It's customizable to fit user needs and roles.

Enhanced Data Visualization

- Create user-specific data visualizations in a low-code environment, reducing cognitive strain and boosting care team productivity.

Ward Dashboards

- Utilize predefined ward dashboards or build custom ones with ease, enhancing access to critical patient data.

Adaptive Design

- Ensure superb user experiences across all devices through adaptive design.
- Collaboration Tools: Use Better's collaboration tools to save time and achieve more in healthcare tasks.

Quick & Easy Access to Patient Information

- Empower care teams with rapid access to the right patient information, improving patient care efficacy.

We believe in a collaborative approach based in our experience and a proven track record of implementing health solutions at both an **organisational** and **national healthcare** level.

Our solutions have been co-created with healthcare institutions, ensuring tailored, efficient systems.
