

intelligent technology. practical solutions.

ITPS Vulnerability Testing as a Service (VTaaS)

ITPS will assess your current environment thoroughly, giving you a set of pragmatic priorities which clearly balance of cost and risk reduction.

Business challenge and value

Safeguarding information systems against cyber threats is a constant challenge – a vulnerability assessment service forms a crucial first line defence by systematically identifying, assessing and prioritising vulnerabilities within networks, applications, and systems.

Its proactive approach identifies weaknesses before they can be exploited, reducing the risk of data breaches and cyberattacks that can damage the business.

Key functionality

VTaaS is available as a one-off engagement or a recurring solution and provides an in-depth analysis of your digital environment to uncover and tackle security vulnerabilities.

Using advanced tools and practices designed to be minimally disruptive, we perform extensive scans to identify risks from software defects to system

misconfigurations, and produce prioritised, actionable insights for swift remediation.

Designed to be minimally disruptive, our service ensures your operations continue smoothly while strengthening your security defences.

Why ITPS?

Our security assessment service is led by consultants who are experts in pinpointing vulnerabilities and giving actionable guidance. We use proven methodology and industry best practices to guarantee top-tier security

and clear, concise 'Get-Well' reports that deliver rapid improvements. Our cost-effective and adaptable process will keep you ahead of emerging threats, maintain compliance, and ensure your critical assets are properly protected.

Get in touch with us today, we'd love to hear from you...

What does it deliver?

- **Actionable recommendations:** Monthly detailed insights into detected vulnerabilities and specific, actionable advice on effectively addressing them.
- **Precise scan results with context:** Thorough scan outcomes, revealing areas of exploitation in your network, the reasons behind them, and strategies to prevent future incidents.
- **Clear, comprehensive vulnerability descriptions:** Dal-level reporting – one for executives and another for tech teams – offering precise, asset-based remediation guidance.
- **Insightful, managed reporting:** Monthly insight-driven reports that highlight ways to mitigate identified vulnerabilities, and show priority risks for targeted action.

Talk to our vulnerability testing experts and find out how we can help you proactively identify and address security gaps, prioritise mitigation, and safeguard your critical assets.
